DETAILED ACTION

Reasons for Allowance

1. Claims 1, 4 & 5 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. With respect to claims 1, 4 & 5: the prior art of records fail to teach or suggest a method for communicating binary data, having logical "0" and "1" value types, as a sequence of UWB pulses each including a carrier signal, the method comprising: sensing whether a carrier phase of a received UWB pulse is inverted or not; rectifying and filtering the received UWB pulse to provide a unidirectional signal; adjusting the polarity of the unidirectional signal based on whether the sensed carrier phase is inverted or not; and detecting the binary data of the adjusted unidirectional signal using a zero-amplitude sensing threshold, thereby increasing immunity to noise as recited in an independent claim 1 and in combination with other elements of the claim.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Nielsen (2004/0179631) teaches UWB receiver architecture.

Art Unit: 2611

- McCorkle et al. (7,010,056) teach system and method for generating ultra wideband pulses.
